## Amendments to the Specification:

Please replace the paragraph beginning at page 2, line 20, with the following amended paragraph:

Non-patent document 2: Masahiro Nagae, Jun Takada, <u>Yutaka Hiraoka</u>, Yoshito Takemoto, <del>Yutaka Hiraoka</del>, and Tetsuo Yoshio. J. Japan Inst. Metals, 64(2000)751-754.

Non-patent document 3: Masahiro Nagae, Jun Takada, <u>Yutaka Hiraoka</u>, and Yoshito Takemoto, and <del>Yutaka Hiraoka</del>. Materia Japan, 40(2001)666-667.

Please replace the paragraph beginning at page 8, line 2, with the following amended paragraph:

An example of an alloy in which oxide particles are dispersed includes a molybdenum alloy containing 1.0 percent by weight of lanthanum oxide (La2O3). A lanthanum nitrate aqueous solution is added to a molybdenum disulfide dioxide powder and dried. The resulting mixture is subjected to hydrogen reduction to form a Mo powder containing 1.0 percent by weight of La2O3. The resulting powder is subjected to hydrostatic pressing and then sintered at 2,070K for 36 ks in a hydrogen flow to form a sintered body. The resulting sintered body is subjected to hot rolling or cold rolling to form into a plate.
